Response to Amendment

Claims 1-10, 12, 24, 33-35 are pending for examination.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's attorney Jamie L. Weigand on June 7, 2006.

Amendment:

To the Application received on March 22, 2006 please modify the claims as following:

1. (Currently Amended) A computer-implemented method of updating content over a network, comprising:

receiving a second version of a file from a global server;

updating a first version of the file on an origin server with the second version of the file, wherein the second version of the file is associated with content on the origin server;

if the second version of the file is updated on the origin server, automatically replacing on a cache server each entry associated with the first version of the file with a corresponding entry in the second version of the file, wherein content on the cache server is automatically updated in response to updating of content on the origin server;

Art Unit: 2161

enabling at least a first origin server to be taken offline, wherein each origin server that is taken offline includes at least some content that corresponds to content on at least a second origin server that remains online, and updating a content item on each origin server that is taken offline with at least a portion of the second version of the file; and

enabling each origin server that is taken offline to be brought back online, and updating content on the cache server that corresponds to the updated content item on each origin server that is brought back online and if the offline origin server is brought back online automatically expiring a time field for all entries of each file associated with the updated second version of the file.

24. (Currently Amended) ~~A method~~ An apparatus for updating content over a network, comprising:

means for updating a version of a file on an origin server with another version of the file, wherein the other version of the file is associated with content on the origin server;

if the other version of the file is updated on the origin server, means for automatically replacing each entry on a cache server associated with the previous version of the file with the other version of the file, wherein content on the cache server is automatically updated with other content in response to the updating of content on the origin server;

means for enabling at least a first origin server to be taken offline, wherein each origin server that is taken offline includes at least some content that corresponds to content on at least a second origin server that remains online, and means for updating a content item on each origin server that is taken offline; and

means for enabling each origin server that is taken offline to be brought back online, and means for updating content on the cache server that corresponds to the updated content item on each origin server that is brought back online, and means for

automatically expiring a time field for all entries of each file associated with the updated content on the cache server if a respective origin server is brought back online.

33. (Currently Amended) A computer-implemented method readable storage medium having executable computer instructions for of updating content over a network, comprising:

enabling at least a first origin server to be taken offline, wherein at least a second origin server remains online while the first origin server is taken offline;

causing a first file to be updated on the first origin server that is offline;

enabling the first origin server that includes the updated first file to be brought back online;

enabling the second origin server to be taken offline;

causing a second file to be updated on the second origin server that is offline, wherein the second file is associated with the first file; and

in response to updating one of the first or the second origin servers, automatically replacing on a cache server a file corresponding to the first file with a file corresponding to the second file, and automatically expiring a time field for all entries of each the file on the cache server corresponding to the first file if the offline origin server is brought back online.

34. (Currently Amended) The ~~method~~ computer-readable storage medium of Claim 33, further comprising enabling the second origin server that includes the updated second file to be brought back online.

35. (Canceled)

Allowable Subject Matter

Claims 1-10, 12, 24 and 33-34 are allowed.

The following is an examiner's statement of reasons for allowance:

Claims 1, 12, 24 and 33 are allowable because the prior art on record or that encountered in searching for the invention, fails to disclose or suggest the features of instant invention – if at least one of the offline origin server is bought back on-line, the cache server will automatically expire a time field for all entries of each file in the cache server that corresponds to the updated content in the bought back origin server – with all the limitations in a combination as claimed by applicant.

Claims 2-10, and 34, depend from claims 1 and 33 respectively, therefore, are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
